state-of-the-art for additive manufacturing of metals

the industrialization of additive manufacturing (am) of metals in sweden. the creation of this roadmap is initiated by the strategic innovation program for metallic materials, in collaboration with vinnova. in this report the focus is on the worldwide state of the art for metal am, with a particular focus on how the situation looks in sweden.

additive manufacturing of metals: a review

keywords: additive manufacturing, metals, ultrasonic, deposition . abstract . over the past 20 years, additive manufacturing (am) has evolved from 3d printers used for rapid prototyping to sophisticated rapid manufacturing that can create parts directly without the use of tooling.

additive manufacturing of metals: a brief review of the

additive manufacturing (am) is the process of fabri-cating objects layer by layer from 3d numerical mod-els, as opposed to traditional subtractive manufacturing technologies. am technologies for metals are numerous and include selective laser melting (slm), selective elec-tron beam melting (sebm) and laser metal deposition

army efforts in metals additive manufacturing & data

- develop and qualify additive new build and repair processes so that project managers may accept resulting components for use in armament systems.
- define design and manufacturing process data required to support repeatable additive manufacturing production.
- provide additive manufacturing solutions for components
