predicting camber, deflection, and prestress losses in

accurate predictions of camber and prestress losses for prestressed concrete bridge girders are essential to minimizing the frequency and cost of construction problems. the

time-dependent nature of prestress losses, variable concrete properties, and problems related to production variables make it difficult to predict camber accurately.

comprehensive design example for prestressed concrete

comprehensive design example for prestressed concrete (psc) girder superstructure bridge with commentary (task order dtfh61-02-t-63032) us customary units submitted to the federal highway administration prepared by modjeski and masters, inc. november 2003 archived
